

## Recommendations

**for single-door refrigerators.**

**Amb. Temp.:43°C**

**Always use LBP compressors**

<b>Refrigerator Volume (l)</b>	<b>R134a compressor</b>	<b>R600a compressor</b>
50	GM35 ..	
100	GM35 ..	HL80 ..
150	GM45 ..	HL80 ..
200	GM50 ..	HL90 ..
250	GM60 ..	HL99 ..
300	GM70 ..	HP12 ..
350	GM75 ..	HP14 ..
400	GM80 ..	HP16 ..
450	GM90 ..	
500	GP12 ..	
600	GM99 ..	

*For amb. temp.:32°C, the immediate smaller compressor should be considered in each case.*

The compressor should be tested in the refrigerator before being selected. The above table is only a general recommendation.

Depending on the refrigerator design, the immediate bigger or the immediate smaller compressor than that indicated in the table could be more suitable.

The responsibility of the definitive compressor selection corresponds to the refrigerator manufacturer. **ZMC** can not accept liability for that decision.
